About

I am a Junior Front-End Developer with a background in law and customer service. I came upon coding with a head full of inspiration, having seen my previous workplaces transformed by web-based technologies.
After school, I found myself going down the law path to follow my family's footsteps, but I never gave up on my interest and continued taking online courses, attending events and meetups, and kept up-to-date with the latest technology trends.
I am looking to join an innovative organisation that fosters employee growth and has a great team culture. I believe that with my skills, my adaptability and my people-focused work ethic, I will be an asset to your team.

Related Experience

Meal-picker	**React and Rails, CSS, Bootstrap** Meal-Picker is an app to search for the best restaurant in Sydney with a super cool Spinning wheel feature. Code: https://github.com/ThiagoDeiro/meal-picker/tree/master
